

MOHAB MOHAMED ABDELMONEM

Frontend Developer | Vue.js | TypeScript | React.js

Mansoura, Egypt | 01007599123 | mohabmohamedd772@gmail.com

Portfolio | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Frontend Developer specializing in Vue 3, Nuxt 3, and TypeScript, with experience building enterprise dashboards, white-label multi-tenant SaaS platforms, and client portals. Skilled in Pinia, PrimeVue, Tailwind CSS, REST APIs, WebSockets, SSR/SEO, PDF and Excel workflows, and feature-based Clean Architecture. Experienced in bilingual Arabic/English interfaces, RTL/LTR support, real-time notifications, data-heavy dashboards, and reusable component systems.

EXPERIENCE

Frontend Developer

2024 - Present

- Develop and maintain large-scale Vue 3/Nuxt 3 applications using TypeScript, Pinia, PrimeVue, Tailwind CSS, SCSS, and reusable component patterns.
- Build enterprise workflows, dashboards, multi-step forms, bilingual RTL/LTR interfaces, role-based experiences, and responsive client-facing portals.
- Integrate REST APIs and real-time features with Axios and WebSockets, and contribute to modular feature-based architectures focused on maintainability and scalability.

Web Developer - E-commerce

2025 - Present

- Design and develop modern storefront interfaces for Salla, WordPress, Shopify, and Zid.
- Customize themes, layouts, navigation, product pages, and checkout experiences to align with brand identity and business goals.
- Improve usability, accessibility, mobile responsiveness, and conversion-focused user flows while delivering projects to deadline.

Programming Instructor

2024 - Present

- Teach Arduino, AI, Machine Learning, Computer Vision, Scratch, Python, and C Programming, helping students build practical technical foundations.
- Mentor students through hands-on applications, problem solving, and project-based learning, encouraging structured and innovative thinking.

CORE SKILLS

FRONTEND	Vue 3, Nuxt 3, React.js, Next.js, Angular, JavaScript, TypeScript, HTML, CSS, SCSS, Tailwind CSS, PrimeVue
STATE & DATA	Pinia, Redux, Axios, REST APIs, WebSockets, STOMP, Vue Router, Vue I18n, Persisted State
ARCHITECTURE	Clean Architecture, Feature-Based Modules, Multi-Tenant/White-Label SaaS, Reusable Components, Composables, OOP, Role-Based Access
PLATFORM	SSR, SEO, RTL/LTR, Chart.js, PDF Generation, Excel/XLSX, Git, Playwright, Responsive Design, Accessibility

EDUCATION & TRAINING

Faculty of Engineering - Mechatronics Department

2019 - 2024

Engineering studies in Mechatronics.

NTI Embedded Systems - Trainee

Hands-on training in microcontroller programming and hardware-software integration.

SELECTED PROJECTS

Education System (EduHub) - Multi-Tenant SaaS | Nuxt 3 | Vue 3 | TypeScript | Pinia | REST APIs

Built a configurable Arabic education ecosystem where each teacher domain loads its own identity, learning stages, courses, books, blog, FAQs, contacts, and student experience. Live tenant deployments: mr-eslamsalama.com and mr-mohamedkarawya.com.

- Developed teacher-branded public sites and student journeys for grade-based course discovery, digital/printed book libraries, book details and order states, teacher profiles, blogs, top-student showcases, login/registration, dark mode, FAQs, and Android/iPhone app handoff.
- Built learning modules for courses, protected multimedia, digital books, timed exams, question banks, homework, favorites, live sessions, student dashboards, purchase/payment verification, and learning-progress tracking across web and mobile.
- Implemented domain-based multi-tenancy, Arabic RTL, responsive design, SSR, dynamic SEO, SWR caching, optimized assets, watermarking/access controls, persistent Pinia state, and tenant-specific configuration.
- Structured the frontend with feature-based Clean Architecture using API services, repositories, use cases, controllers, models, centralized error handling, and automated regression tests for authentication, purchases, exams, protected content, SEO, and tenant behavior.

Orbit System - Engineering ERP Ecosystem | Nuxt 3 | Vue 3 | TypeScript | Pinia | PrimeVue | WebSockets

Multi-portal engineering consultancy platform spanning the Echo System website and internal dashboard, with a dedicated client experience for project visibility and service interaction.

- Built workflows covering client requests, quotations, technical studies, designs, permits, authority approvals, tenders, supervision, invoicing, and final project delivery.
- Developed dashboards for projects, clients, reservations, payments, invoices, HR, attendance, daily work, tasks, meetings, documents, tickets, and employee performance.
- Integrated REST APIs and real-time communication using WebSockets/STOMP patterns, with role-based permissions, protected routes, notifications, chat, and project status monitoring.
- Created interactive reports and specialized engineering tools including PDF/Excel generation, Chart.js dashboards, project histories, and CAD/DXF drawing visualization.

HSE Management System - Safety Operations Platform | Vue 3 | TypeScript | Pinia | PrimeVue | Tailwind CSS | REST APIs

Comprehensive bilingual HSE platform that centralizes workplace safety operations across organizations and projects, with configurable workflows, dashboards, reporting, and role-based access.

- Developed modules for projects, workforce, equipment, observations, hazards, incidents, inspections, audits, investigations, CAPA, permits, PPE, risk assessments, drills, meetings, and Management of Change.
- Built investigation and corrective-action workflows with evidence, witness statements, root-cause analysis, Five Whys, action plans, due dates, verification, lessons learned, and closure tracking.
- Implemented configurable inspection/audit templates and master data, real-time and planned notifications, task status tracking, permission-based access, and English/Arabic RTL support.
- Delivered project dashboards and filterable PDF/Excel reports for incidents, hazards, inspections, audits, investigations, PPE, permits, workforce performance, and lost-time statistics.

Orbit Client Portal - Business & Project Dashboard | Vue.js | REST APIs | Responsive UI

Client-facing business portal for project visibility, company information, invoices, and operational updates within the Orbit engineering ecosystem.

- Built responsive dashboards for clients to view invoices, company data, project information, progress, milestones, and status updates through API-driven interfaces.
- Created clean component-based layouts and Client Monitor views focused on structured business data, stakeholder visibility, and consistent UX across devices.
